User Manual

Every menu, how to use it, and its effect on accounts and stock

Edition: 04 October 2026

Contents

1. Getting started
2. Master Data menu
3. Data Entry menu
4. Accounts Report menu
5. Sales/Purchase menu (reports)
6. Analysis menu
7. Setup menu
8. Tools and Office menus
9. How the numbers fit together

This manual explains every menu: what it is for, how to use it, and what it does to your **accounts** (ledgers, Trial Balance, P&L, Balance Sheet) and your **inventory** (stock quantity and value).

The effect of each transaction is shown in a box like this:

Accounts: what is debited and credited. **Stock:** what goes in or out.

Help inside the system

- Every screen: **? Help** on the title bar (or Shift+F1) - what the screen is for, how to use it, its effect on accounts, stock and VAT, and every field on it.
- Every field caption with a dotted underline shows its help when you point at it.
- **Tools > Help Center:** this manual, a manual for each Business Nature, the IRD Billing architecture and user manual (everyone); the Developer Guide and the PDF of every menu screen (super admin).

1. Getting started

1.1 Logging in and the screen

- Log in with your company code, user name and password.
- The top menu bar has **Master Data, Data Entry, Accounts Report, Sales/Purchase, Analysis, Setup, Office, Tools. Poultry, Construction and Automobile** appear only when that Business Nature is turned on in System Control.
- Menus open to the side (fly-out). A thin line separates groups of options.
- Press **Enter** to move to the next field. In a grid, Enter moves to the next cell and then to a new line.
- Every report table has an Excel-style filter on each column heading.

1.2 Creating a company

- **Company Creation:** company name, type, **PAN / VAT Number** (one field - the same number is used as PAN and VAT), address, contact, and the first fiscal year: **Starting Year** (B.S.) and **Starting Month** (default Shrawan). E.g. 2082 + Shrawan = Fiscal Year 2082/83 from 2082-04-01.
- Every company gets a 9-digit company code (e.g. **446662298**) and its own database.
- **More companies in your tenant:** a company admin clicks **New Company** on the title bar, enters the company name and a short code (e.g. **abc**) and creates it. It gets the code **446662298_abc** and its own database; your admins are its admins, it shows in the company switcher, and you can sign in to it with that code. (Needs the ERP on its own PostgreSQL server.)

1.3 First-time setup order

1. **Setup > System Control:** Business Nature, default ledgers, VAT, stock method, dual unit, approvals.
2. **Setup > Fiscal Years, Branches & Warehouses, Document Numbering, Currencies.**
3. **Master Data > Chart of Accounts:** groups and ledgers (customers, suppliers, banks, expenses).
4. **Master Data > Billing Terms** (VAT, discount, freight ...).
5. **Master Data > Product Units, Product Groups, Categories, Product Master.**
6. **Ledger Opening Balance and Product Opening Stock.**
7. **Setup > Users, Security Groups, Data Access.**

1.4 Buttons on every transaction screen

Button	What it does	Effect
Create / Save	Saves the entry. If the module does not need approval, it is posted at once.	Accounts and stock are updated immediately
Save as Draft	Keeps what you typed as a temporary draft (no number).	None
Modify	A draft opens for editing. A posted entry is first reversed and reopened as a draft with the same number; change it and save again.	Old effect removed, new effect posted on save
Remove	Deletes a draft.	None
Cancel	Cancels a posted entry (a reason is required). The entry stays in the list as Cancelled.	All its effects are reversed
Reverse	Shown instead of Cancel on Sales Bill and Sales Return when Computerized Billing (IRD) is on. The bill is reversed by a return, as IRD requires.	Reversed through the return
Print	Prints with the design from Document Designer.	None

Fill bar (one line at the top of every entry: the actions above, then **Template**):

- **Fill from Template:** fill from a saved template.
- **Fill from Previous Entry:** copy an earlier entry with a new number and today's date.
- **Open a Draft:** open a saved draft. When you save it as a real entry, the draft is deleted automatically.
- **Save as Template:** store the current entry as a template, for yourself only or for everyone.

Window title bar: Back, Refresh, Print, Dashboard, Report Center, **Related** (other screens of the same menu group), **Reports** and **? Help** sit on the screen's title bar, so the form starts right below it. On a phone the title bar keeps Back, Refresh, Related, Reports and Help as icons; forms become one column and the fill bar scrolls sideways.

Approval: when a module is ticked under System Control > Approval Needed For, Save keeps the entry as **Awaiting approval** with no effect. Only a user whose Security Group has the approval right for that document can approve it. Approving posts it, and only then do accounts and stock move.

1.5 Common parts of a sales or purchase entry

- **Master part** (top): date (BS/AD), document number (automatic or manual, following Document Numbering), Cash/Credit, party, currency and exchange rate, sales rate type (Sr1-Sr5), agent, warehouse, and the source documents to pull from.
- **Item Code cell:** type a code, short name or barcode. In POS mode, scanning a barcode adds the item straight away.
- **Grid:** qty (and alternate unit for dual-unit items), free qty, rate, **Gross**, **Add / Less**, **Net Amount**. When System Control shows item charges for the entry, Add / Less is a button: it opens the line's Item Charges pop-up (discount, tax, excise ...) and shows the pop-up's total. When item charges are off, Add / Less only shows the amount (the product's term values still count). You may type the gross or net amount; the rate (or the qty, when the product allows it) is worked out for you.
- **Product-wise term popup:** discount, excise and similar terms for one line. You may type %, rate x qty or amount, depending on the term; the other values are worked out.
- **Overall term popup:** bill-level terms (VAT, freight, bill discount, rounding off). Amounts are split over the lines by value or quantity. The Local Amount shows the value in NPR when a foreign currency is used.
- **Footer tabs:** accounts, party address/PAN (with an option to update the master), remarks, and the total in words.

2. Master Data menu

2.1 Accounts Masters

Chart of Accounts (Ledger)

- Create account groups and ledgers. The group decides where a ledger appears in the Balance Sheet or P&L.
- The ledger code is automatic (customer, supplier or both).
- Options on a ledger: credit limit and credit days, bill-wise tracking, interest %, PAN, address, area, route, agent, default sub-ledger.

Accounts: only the structure; no entry.

Sub Ledgers

- A second level under a ledger, e.g. employees under Salary, or vehicles under Fuel. Reports can show balances per sub-ledger.

Cost & Profit Centers

- Departments, projects or units to which income and expense lines can be tagged. They are used in P&L by Cost Center, Cost Center Statement and Budget reports.

Billing Terms

- Define terms used in bills:
 - **Use As** (sales and purchase terms): **VAT, Excise Duty, Discount or Other Addition**. VAT and Excise Duty post to the VAT / Excise ledgers and reports; a Discount always deducts and an Other Addition always adds (the Sign follows; only a Rounded Off term sets its own sign).
 - **Sign**: add or deduct (set by Use As).
 - **Basis**: value or quantity. On a purchase the term reaches the stock value on the same basis: an over-all term with Basis = Quantity is shared over the lines by qty (base units), with Basis = Value by line value; a product-wise term stays on its line. A term with *Include in costing* off is not put into stock (Purchase vs Stock reconciliation shows it as not in costing). Example: Freight 300 by quantity on 10 pcs A + 20 pcs B gives A 100 and B 200; a 10 % discount by value takes 100 from each of A and B (1,000 each).
 - **Calculation**: percentage, fixed rate, or formula, with an optional cap.
 - **Order** of calculation.
 - **Ledger** and sub-ledgers: Billing Ledger + Billing Sub-Ledger, Return Ledger + Return Sub-Ledger, Expiry Return Ledger + Expiry Return Sub-Ledger.
 - **Category**: e.g. Rounded Off, which rounds the bill and posts the difference.
 - **Entry input**: which of %, rate and amount the user may type.
 - **Manual override**: whether the value can be changed in the entry.
 - **Show in summary**.
 - **Term Used For**: *Transaction term* (Sales / Purchase / Production Entry - charged on the bill itself) or *Additional term* (Purchase Additional / Sales Additional - a later bill such as freight, customs, insurance).
 - **Effect**: **Include In Costing** (the amount goes into the cost of the goods / landed cost; off = an expense only) and **Include In Profitability** (counted in the profitability reports).
 - **Product Wise**: entered per product in a pop-up; otherwise bill-wise, divided over the products by the Basis.

Accounts: each term amount posts to the term's ledger when a bill is posted (VAT to the VAT ledger).

Remarks & Terms

- Standard remark texts and terms and conditions printed on documents.

Fixed Assets

- The asset register: cost, date put to use, method (straight line or written down value), rate, asset / accumulated depreciation / expense ledgers.

Accounts: none until depreciation is posted (see 3.1).

Ledger Opening Balance

- Enter each ledger's opening Dr/Cr for the first fiscal year. For bill-wise parties, enter the open bills.

Accounts: sets the opening balance used by every report.

2.2 Product Masters

Product Master

- Code, short name, barcode, group, category, company, units (base, alternate, and dual unit with conversion factor).
- **Rate basis** for fixed dual items: any, primary or secondary unit.
- Sales rates Sr1-Sr5, purchase rate, MRP.
- VAT or non-VAT, excise.
- Sales / purchase / return / non-saleable return accounts, each with its own sub-ledger (e.g. Sales Return Account + Sales Return Sub-Ledger).
- Product-wise term values.
- Flags "qty from amount" for sales and for purchase.
- Batch/serial, expiry, re-order level, fixed-asset item.

Accounts: decides which sales/purchase ledger a line posts to. **Stock:** decides the unit conversion.

Product Units

- Units such as PCS, CRT or KG, used in the unit conversions of each product.

Product Groups

- Group products for reports and data access (with extra details such as parent group and short name).

Categories

- Another way to classify products (brand, type) for reports and pricing.

Product Opening Stock

- Qty, rate and warehouse (batch/serial) on hand at the start.

Stock: stock in, on the day before the first fiscal year. **Accounts:** none; the value appears as opening stock in the statements.

BOM Template

- Bill of materials: the raw materials and quantities that make one unit of a finished product, with by-products. Used by Production Order.

2.3 Rate & Discount

Menu	Use
Multiple Rate Types (Sr1-Sr5)	Name the five sales rate columns (e.g. Wholesale, Retail, Dealer).
Rate Category	Give a customer category its own rate type or rate list.
Discount Category	Default discount % by customer category and product group.
Product Rate Change	Change the rates of many products at once, from a date.
Offer Rate	Scheme or offer rate for a period (date range), picked automatically in sales.

Accounts / Stock: none. They only fill rates in entries.

2.4 Sales Force & Routes

Menu	Use
Salesman / Agent	Salesmen and agents with commission %, area, targets and mobile login.
Route Sequencing	The order in which customers are visited on each route.
Route Plan & Mobile Login	Which route a salesman visits on which date; login for the Salesman Mobile App.
Transport Master	Transporters and vehicles printed on challans and bills.

2.5 Poultry Masters (Poultry only)

- Sheds and hatchers, poultry items (chick, feed, medicine, vaccine), breed standards, and poultry settings (ledgers and warehouse used by poultry postings).

3. Data Entry menu

3.1 Accounts

Journal Voucher

- Top: Voucher No. (from Document Numbering), Date, **JV Type**, Ref Doc No / Date, Memo Only, Cost Center, Unit.
- **Dates** can be English (AD) or Nepali (BS): the **AD / BS** button switches. In BS you type the date (2083-06-01 or 2083.6.1) or pick it from the Nepali calendar (); the other calendar's date shows beside it. The choice is remembered on your computer.
- **JV Type** decides which options show:

JV Type	Options	Voucher lines made for you
Normal Journal	none	you type the lines
Taxable / Non-taxable Purchase	supplier, PAN, bill no / date, taxable, non-taxable, VAT, purchase / expense A/c, TDS	Dr purchase, Dr VAT, Cr supplier (less TDS), Cr TDS payable
Taxable / Non-taxable Sales	customer, invoice no, amounts, VAT, sales A/c, TDS	Dr customer (less TDS), Dr TDS receivable, Cr sales, Cr VAT
Asset Purchase / Asset Sales	as above, with a Fixed Asset A/c (sales may use a disposal income A/c)	same pattern; an asset purchase is a capital purchase in the VAT return
Service Purchase / Service Sales	as above, with a service expense / service income A/c	same pattern
TDS - on Purchase	supplier (supplier / both ledgers), the supplier's Purchase Bills and Purchase Additional Expenses without TDS (newest first, tick one or many), TDS % (per bill or for all), TDS ledger + sub-ledger	Dr supplier (TDS), Cr TDS payable (TDS). With no bill: Dr expense (amount), Cr TDS payable, Cr supplier (amount less TDS)
TDS - on Sales	customer (customer / both ledgers), the customer's Sales Bills without TDS, TDS %, TDS receivable ledger + sub-ledger	Dr TDS receivable (TDS), Cr customer (TDS)

- TDS is only on the types that have it (not on a normal journal). The TDS ledger defaults from System Control and has its own **TDS Sub-Ledger**.
- TDS on bills: the base is each bill's value without VAT. A bill that has taken TDS (on a TDS journal, or on the bill itself) is not shown again; the journal keeps the list of its bills. Cancelling the journal frees them.
- The party list follows the side: suppliers + "both" ledgers for purchase, customers + "both" for sales. The voucher-line ledger list shows only that party side, the type's accounts (expense / income / asset), VAT and TDS ledgers.
- Example: taxable 1000, VAT 13% (130 worked out), non-taxable 1000 -> Purchase A/c 2000 Dr, VAT 130 Dr, supplier 2130 Cr.
- **Auto balance** (every JV): type 100 Debit on line 1, choose the ledger on the next line and press Enter - 100 Credit is filled in (and the other way round). You can change it.
- The lines are filled automatically and can still be edited; **Refill** puts them back.
- The type's options are in folding sections (**Vendor/Customer Details**, **Bill Details**, **Bills without TDS**, **TDS**): click the arrow to hide one after filling it - its summary stays on the right. TDS on Purchase and TDS on Sales are separate choices in the JV Type drop-down.
- **Narration** is one field in the footer (saved remarks are offered as you type).

Accounts: exactly the voucher lines. Tax types appear in the VAT register and VAT return; any TDS appears in the TDS report. Party lines create bill-wise references. **Stock:** none.

Cash / Bank Entry

- A receipt or payment voucher. The master has the Cash/Bank ledger; each line is a ledger (party, expense, income) with a Receipt or Payment amount, plus line remarks.

Accounts: Receipt: Dr Cash/Bank, Cr each line ledger. Payment: Dr each line ledger, Cr Cash/Bank. Bill-wise parties settle their oldest bills first (FIFO); you can adjust the suggestion.

Debit Note

- Increases what a party owes you, or reduces what you owe a supplier (rate difference, claim).

Accounts: Dr party, Cr the chosen ledger(s).

Credit Note

- Reduces what a customer owes you, or increases what you owe (discount after the bill, claim).

Accounts: Dr the chosen ledger(s), Cr party.

PDC (post-dated cheque)

- Record cheques received or issued with a future date. Deposit and then Realize (or Bounce).

Accounts: nothing until **Realized**. A received cheque then posts like a receipt, an issued cheque like a payment.

Bulk Cash Settlement

- Receive cash from many customers in one screen (e.g. after a route).

Accounts: one receipt per party (Dr Cash, Cr customer).

Bank Reconciliation

- Match bank statement lines (typed or imported) with book entries. Auto-match learns from your matches.
- Shows the Bank Reconciliation Statement and matched/unmatched lists.

Accounts: none (it only records clearing dates).

Interest on Overdue

- Works out interest on unpaid customer bills after their due date (+ grace days) at the ledger's interest %.

Accounts: posting the run debits each customer and credits Interest Income. A bill is never charged twice for the same days; cancelling the run reverses it.

Depreciation Posting

- Choose the period; review the preview; post.

Accounts: Dr Depreciation expense, Cr Accumulated depreciation (or the asset ledger). Selling an asset on a Sales Bill disposes it automatically: its book value leaves the asset and the gain/loss shows in the disposal ledger.

Budgets

- Budget amounts by ledger, sub-ledger, cost center, unit or document class, per month. Compared in Budget vs Actual.

Account Confirmation Letters

- Balance confirmation letters for parties, printed or sent by message.

3.2 Sales Transaction

The normal flow is Quotation -> Order -> Delivery (Challan) -> Bill -> Return. Each later document can pull from the earlier ones (**Pending** button in the master part), as allowed by Entry Field Control. The **Quotation No. / Order No. / Challan No.** boxes are right after the Customer / Vendor. After choosing the party, Enter moves into these boxes: the first Enter on a box opens that party's pending list (tick, then Pull), the next Enter moves on to the next box and then the rest of the form. Type a number in a box to find a document of any party. The same boxes are on every sales and purchase entry (Quotation, Order, Challan / GRN, Bill, Return, Non-saleable Return). Pulling also brings the source's master part - sub-ledger, product company, agent, area, route, cost center, remarks, narration, rate type, currency - and its billing terms (document and product-wise) into the new entry:

Document	Can pull from
Order	Quotation
Delivery / Challan	Quotation, Order
Bill	Quotation, Order, Delivery
Return	Bill

Only quantities still pending are offered. The source document shows as partially or fully used.

Sales Quotation

- A price offer to a customer.

Accounts / Stock: none.

Sales Order

- The customer's confirmed order. The credit limit is checked.

Accounts / Stock: none. Pending orders show in reports and on the mobile app.

Order -> Bill (single / multiple)

- Turn one or many orders into bills in one step, with rate and qty editable.

Effect: as Sales Bill.

Sales Delivery / Challan

- Goods leave the warehouse before (or without) the bill.

Stock: OUT. **Accounts:** none (the bill books the sale).

Sales Bill / Invoice

- The tax invoice. Cash or credit. Includes product-wise and bill-wise terms, currency, and bill-wise settlement of advances.

Accounts: Dr Customer with the bill total; Cr Sales account per product line; Cr VAT Payable; each term to its ledger.

Stock: OUT only for lines **not** already delivered by a challan. **IRD:** the bill goes to the IRD sales register and is sent to CBMS when enabled.

Receipt / TDS button (footer of the Sales Bill):

- **Received with this bill:** one line per cash or bank ledger, e.g. a 500 bill with 100 in cash and 400 in NIC Asia Bank. Use + **Cash** / + **Bank**, choose the ledger, type the amount (and cheque no.).
- **Cash bill:** cash + bank + TDS must equal the bill total. If you enter nothing, the whole bill is taken as received in the default Cash ledger (System Control).
- **Credit bill:** enter what was paid now, e.g. 300 of a 500 bill; the remaining 200 stays outstanding on the customer.
- **TDS** deducted by the customer: TDS % (or amount) on the VAT-exclusive value, TDS Receivable ledger (default from System Control).

Accounts: Dr each cash / bank with its amount, Dr TDS Receivable, Cr Customer. The bill shows only the balance as outstanding. Cancelling the bill reverses all of it.

Sales Return

- Goods returned by a customer, against the bill.

Accounts: Dr Sales Return (or sales) account, Dr VAT, Cr Customer. It settles the customer's open bills first. **Stock:** IN.

Sales Non-saleable Return

- Damaged or expired goods returned.

Stock: IN to the separate non-saleable stock, not to saleable stock. **Accounts:** with credit, like a Sales Return; with no credit, none.

Sales Additional Entry

- Extra charges billed to a customer later (freight, packing, interest), or deductions.

Accounts: Dr Customer, Cr income ledger for each add line (Dr for each deduct line). **Stock:** none.

Salesman Targets & Commission

- Set targets per salesman or period, see achievement (the target report), and post commission once per target.
- **Bill-wise Commission:** the salesman's posted bills (value without VAT, less returns against the bill) with the salesman's commission %. Change the % or amount per bill, tick one or all, and post. A bill that got commission is never offered again; cancelling the posting in the Commission Register frees its bills.

Accounts: Dr commission expense / Cr commission payable (salesman's ledgers, or chosen on posting).

Small Balance Write-off (Journal Voucher)

- Journal Voucher > JV Type "Small Balance Write-off (bulk)" (or Accounts > Small Balance Write-off).
- Choose customers / suppliers / both, Dr / Cr balances, the "up to" amount (e.g. 50) and the date; list; tick all or some; choose the discount ledgers; post.
- One JV nils all ticked parties; their open bills are settled. Cancelling the JV undoes it.

Accounts: Dr balances - Dr Discount Allowed / Cr party; Cr balances - Dr party / Cr Discount Received.

Mobile Approvals

- Cash receipts and sales returns entered on the salesman's phone wait here as pending (no effect).
- Tick one, several or all and **Post ticked**. The salesman is already the agent on each entry.

Accounts: receipt - Dr mobile cash ledger, Cr customer; return - as Sales Return. **Stock:** returns come in on posting.

3.3 Purchase Transaction

The flow is Quotation -> Order -> GRN -> Bill -> Return, with the same pull rules: Order <- Quotation; GRN <- Quotation + Order; Bill <- Quotation + Order + GRN.

Purchase Quotation

- A supplier's price offer.

Accounts / Stock: none.

Purchase Order

- The order sent to a supplier.

Accounts / Stock: none.

Purchase GRN (Goods Receipt Note)

- Goods received before the bill arrives.

Stock: IN. **Accounts:** if a GRN Clearing ledger is set in System Control: Dr Goods (purchase) account, Cr GRN Clearing (a temporary liability until the bill comes). Otherwise none.

Purchase Bill

- The supplier's invoice.

Accounts:

- Bill without GRN: Dr Purchase account per product line (without VAT), Dr VAT (input), Cr Supplier; terms to their ledgers.
- Bill from a GRN: Dr GRN Clearing, Cr Supplier, and the VAT moves from the goods account to the VAT ledger.

Any advance paid to the supplier is settled first (FIFO).

TDS (TDS button in the footer): TDS % or amount on the VAT-exclusive value. Dr Supplier, Cr TDS Payable - the supplier is owed the bill less TDS. Shown in the TDS Report.

Stock: IN only for lines **not** already received by a GRN.

Purchase Bill from Image / PDF

- Upload a photo or PDF of a supplier bill. The system reads it and fills a Purchase Bill for you to check and save.

Effect: as Purchase Bill.

Additional Expenses (Purchase Additional Bill)

- Freight, customs, insurance or labour on goods already billed. Choose the **Ref. Bill No.** (required) - only the purchase bill is linked, not the order or GRN. The bill's vendor comes in as the vendor; change it when someone else is paid. Older entries linked to an Order / GRN show it as "Linked (older entry)".
- The Ref. Bill date / amount and its product lines are shown.
- **Product-wise Terms** tab (first): the products of the linked document; **Terms...** opens that product's terms (Billing Terms with Purchase Additional + Product Wise). Rate % is of that product's value. The whole amount goes to that product's cost.

- **Bill-wise Terms** tab: a fixed form with one row per bill-level Purchase Additional term. Fill the amounts that apply. Each row is divided over the bill's products by the term's basis (value or qty; changeable per row). Empty rows are left out.
- A term's **ledger is fixed** by the term; only its **sub-ledger** can be changed. **Paid to** (the other ledger) and its sub-ledger are chosen freely - empty means the entry's vendor.
- Each row (one line per term) has Paid to, Supplier Bill No, Bill Date, VAT % and VAT. The **bill type is automatic**: VAT on the row = taxable bill, a bill no without VAT = tax-free bill, neither = no bill (wages, loading ...). Rows of one party with the same bill no make one bill (its taxable and tax-free parts are kept apart) and the party is credited with it. Because these are per row, **one entry can hold several taxable bills** (e.g. freight bill of transporter A with VAT, customs agent B's bill with VAT); each (party, bill no) is its own bill in the Purchase VAT register. A term not "Include In Costing" stays out of the cost; claimable VAT is never cost.
- **TDS** is worked out by itself (**Auto TDS**): every line has a **TDS %** column - from its Billing Term (*TDS Applicable* + *TDS %*, empty % = System Control default TDS %), changeable per line (0 = no TDS). One TDS line per party and rate follows every change of amount, party, term or TDS % - base = that party's lines at that rate, without VAT; ledger / sub-ledger from System Control. E.g. Freight 6,000 at 1.5 % -> TDS 90 and Loading 1,000 at 15 % -> TDS 150, as two TDS lines. Typing on a TDS line takes it over by hand (Auto TDS off); **Recalculate TDS** rebuilds once. TDS is non-additional - never added to cost. It appears in the TDS Report.
- Totals as on the paper form: Prd. Additional / Prd. Non-Additional (product-wise terms), Gen. Additional / Gen. Non-Additional (bill-wise terms), Net Additional (to stock cost), Net Non-Additional (claimable VAT, TDS, terms not in costing), Total and Net Total.
- The header shows the **vendor of the Ref. Bill (read only)**; there is no Cash / Credit choice - every line has its own **Credit A/c** (vendor, cash, bank, customs agent or any balance-sheet ledger; empty = Ref. Bill vendor). The allocation basis comes from the Billing Term; the term ledger's **Sub-Ledger** is a column of its own.
- **Customs (Bhansar)** tab - **for the VAT report only, no ledger posting** (the account effect of customs duty / VAT comes from the Bill-wise or Product-wise terms): one row per Pragyapan Patra - PP no / date, **Customs Office** (drop-down from the Customs Offices master - Nepal's offices are created with a code), **Bill-wise or Item-wise**; Assessable Value, Taxable Value, Tax-free Value, VAT % and VAT. Item-wise enters the values per product of the Ref. Bill and sums them on the row. The Purchase VAT register shows it as an **Import** purchase (taxable = import taxable); "Show items under each bill" / Item-wise view lists the products.
- **Credit Sub-Ledger** column beside Credit A/c (empty Credit A/c = Ref. Bill vendor; its sub-ledger can still be picked).
- **JV button** on every transaction list (sales, purchase, returns, additional bills, cash / bank, journal, PDC, production, stock transfer ...): shows the ledger entry (JV) the transaction posted - ledger, sub-ledger, Dr / Cr and the Dr = Cr check.
- Bottom tabs: **Goods Details** (Ref. Bill products with additional, net amount and cost / unit), **Party Bills / VAT** (per party and bill: taxable amount, VAT, tax-free amount, less TDS, amount credited to the party) and **Account Posting** (the exact ledger entry, Dr = Cr). The **Totals** panel on the right shows Prd. / Gen. additional and non-additional, taxable, VAT, tax-free, TDS and the Net Payable, with a check that it equals the party credit in the posting.

Accounts: Dr term / expense ledger with its sub-ledger (+ VAT when VAT is part of cost), Dr VAT (claimable), Cr supplier/party with its sub-ledger; a deduct line credits the ledger and reduces the party. **Stock value:** the allocated amount is added to the cost of the linked purchase lines (landed cost).

Purchase Return

- Goods returned to a supplier.

Accounts: Dr Supplier; Cr Purchase Return (or purchase) account per line; Cr VAT. It settles the supplier's open bills.
Stock: OUT.

Non-saleable Return (Purchase)

- Damaged stock sent back or written off.

Stock: OUT of non-saleable stock. **Accounts:** a write-off debits Write-off Expense and credits Non-saleable Stock Asset; a credit note works like a Purchase Return.

LC Register & Mapping

- Letters of credit: opening, amendments, expiry, linking to purchase documents, and LC cost.

3.4 Production

Production Order

- Pick the finished product (and BOM). Raw materials are filled from the BOM and can be changed; enter output qty and by-products. Billing terms (% , rate or amount) can add extra costs.

Stock: raw materials OUT, finished goods and by-products IN, valued at the raw-material cost plus costs (split over joint products). **Accounts:** none directly; the value shows through stock.

BOM Template

- See 2.2.

3.5 Inventory

Stock Transfer

- Move stock between warehouses or branches. A two-step branch transfer is dispatched first and received later.

Stock: OUT from the sending warehouse, IN to the receiving one; company total unchanged. **Accounts:** only if Stock Transfer GL Posting is on: Dr receiving stock account, Cr sending stock account. In two-step mode the entries go through Goods in Transit.

Stock Adjustment (shortage, damage, excess; also used by poultry consumption)

Stock: IN or OUT. **Accounts:** a shortage or damage debits Stock Loss/Damage expense and credits Stock Adjustment; an excess debits Stock Adjustment and credits Stock Gain.

Barcode / Label Printing

- Print barcode labels for products, with ready formats or your own design.

3.6 Automobile, Construction, Poultry, Office

- **Automobile:**
 - Customer Enquiry; PDI / Vehicle Delivery (vehicle stock to customer); Job Card (workshop service, parts issued, labour, outside work); Service Reminders.
 - Vehicle and parts sales post like Sales Bills; parts issued move stock OUT.
- **Construction:**
 - Sites / Contracts (thekka); Running Bills to the client; sub-contracts (petti thekka); material issue to site (stock OUT); wages per site.
 - Site profit = billed - material - wages - sub-contract.

- **Poultry & Hatchery:**

- Broiler batch placement (chicks in); daily log of feed, medicine, vaccine and mortality (stock OUT to the batch); lifting (sale of birds, posts like a sales bill).
- Hatchery: egg set, candling, hatch (chicks IN).

- **Office:**

- Tasks (assign, follow up, due dates).
- Darta / Chalani register (incoming/outgoing letters with number and date).
- No accounting or stock effect.

4. Accounts Report menu

Every report: Grid, pivot and chart. Above each report table there is a switch **Grid | Report** (simple lists open as Grid; reports with headings or sub-totals open as Report - the choice is kept per report). In **Grid**:

- **Rows / Columns** (the thin line above the toolbar): drag a column header to **Rows** to group (a tree with sub-totals, orders the groups); drag it - or a Rows chip - to **Columns** and its values become columns (**pivot**, e.g. Party x Month); drag a chip back from Columns to Rows. Σ **Values** decides what the pivot adds up (Sum / Average / Count / Min / Max / Distinct); with no value the pivot counts rows. **Heat map** shades pivot cells by size.
- **Columns** opens the **Field Selector** (a pane on the right): tick fields to show / hide, drag to reorder, **Show Grouped** on / off, and the four areas **Filters / Columns / Rows / Values** - drag fields between them; drop a chip on the list to remove it.
- **Filters**: in a header (faint until you point at it) picks one or many values; **AutoFilter** adds a box under every header (text, > 1000 , < 50 , $= value$) with its own value picker; **Filter** holds conditions (between, blank, not blank ...) and lists every active filter. Nothing is listed outside the grid.
- **Manager**: several sort levels (Shift+click a header adds one) and the group levels, each ordered by name, row count or the Sum of a number column (e.g. parties biggest first). Σ **Footer**: an aggregate under every column. **Fit**: columns fitted to their content (again: automatic).
- **Chart**: column, stacked, horizontal bar, line, area, pie, donut of the rows shown - category, one or more values, **split by** a column, Top N + Other, pivot table, PNG / SVG / CSV; click a bar to filter the grid to it. In the pivot view the chart follows the pivot.
- **Highlight** (row colours, data bars), **Column** (running balance, % of total, formula), **CSV**, **Print** (as shown - groups, sub-totals / the pivot), right-click a header for the same actions.
- **Only dates up top**. On a report the empty filter boxes for product group / company / category, item, party, area, route, agent, branch, warehouse, cost centre, search ... fold under **More filters (n)** next to Show (a box with a value stays in sight). Filter them in the grid instead: a report that shows an item or a party gets that item's **Product Group, Product Company, Product Category, Unit** and that party's **Account Group, Area, Route, Salesman / Agent, Customer Category, PAN** as fields (marked *master* in Columns) - tick to show, drag to Filters / Rows / Columns.
- Report headings (e.g. Sundry Debtors) and tree levels (Customer > Product Group > Product) become columns of their own, grouped; the report's opening / total rows stay pinned (yellow). Links and buttons in the rows (open voucher, Edit ...) work from the grid. **Report** and the page's print show the report as designed.

4.1 Accounts & Finance

Report	What it shows
Ledger Report (detail / summary / monthly)	Every entry of a ledger with running balance; summary per ledger; month-wise totals. A small options panel holds only dates, view, sort and ticks (Remarks, Product Details, Billing Terms product-wise / bill-wise, Doc. Agent, Ledger Details, Page Break, PDC Balance, PDC Separate in Summary, LC / BG / PDC, Pending Bills); the filters are under Filters. Options and filters sit in a side panel (tab on the left); OK shows the report and hides the panel. The Summary view reads like the printed party ledger summary: Short Name, Account Name, Opening / Period / Closing Debit and Credit, group sub-totals and a grand total, with the company name, PAN, fiscal year and period on top.
Party Summary	Per party: opening, sales, returns, receipts, payments, notes, closing.
Day Book	All entries of a day or period.
Cash & Bank Book	Cash and bank ledgers with daily balances.
Trial Balance	Every ledger's Dr/Cr balance.
Profit & Loss	Income and expenses; stock valued by the chosen method.
Balance Sheet	Assets, liabilities, equity, with closing stock.

Report	What it shows
Schedules / Notes	Group-wise break-up with opening, Dr, Cr, closing.
Ratio Analysis, Cash Flow, Funds Flow	Standard financial analysis from the same figures.
Group Mapping	Where each account group lands in the P&L / Balance Sheet.
Net Position of Funds	Cash, bank, receivables and payables position.
Bank Reconciliation Statement, Matched/Unmatched	From Bank Reconciliation.
Outstanding, Ageing, Bill-wise Ageing	Unpaid bills by party and by age bucket.
Interest on Overdue (register)	Posted interest runs.
Balance Confirmation Letters	Letters to parties.

4.2 Budget & Dimensions

- Budget vs Actual and variance (by ledger, sub-ledger, cost center, unit, document class).
- Sub-ledger summary and statement.
- P&L by cost center, unit, branch or document class.
- Cost center x ledger and monthly trend.
- Document class register (number gaps).
- Missing dimensions.

4.3 VAT, TDS & IRD

- Sales/purchase VAT register, VAT monthly summary, Annex 13 (above threshold), VAT return, VAT ledger, TDS report.
- IRD materialized view, IRD sales book, CBMS sync status (resend failed bills), IRD bill audit log.
- **Reconciliation (VAT / Sales / Purchase / TDS)** - checks that the registers and the books agree for the chosen dates, document by document, including taxable Journal Vouchers (JV purchase / sales / TDS):
 - **Overview:** the four checks side by side, each marked *Tallied* or *Not tallied*.
 - **VAT:** VAT register vs all VAT ledgers. **Sales Account:** sales register vs sales accounts. **Purchase Account:** purchase register (with expense bills and JV purchases) vs purchase / goods accounts; a bill made from a GRN is checked together with that GRN. **TDS:** TDS on bills, JVs and expense bills vs TDS ledgers.
 - Each document shows Register, Books and Difference with a status: *Matched*, *Difference*, *Only in register* (not posted to these accounts) or *Only in books* (for example a normal JV posted to the VAT ledger, or a GRN not billed yet). Click a summary box to see only those.
 - The accounts compared are found automatically (System Control, products, documents, VAT terms); add or remove an account with the chips, *Automatic* goes back.
 - Signs: VAT, sales and TDS are Cr - Dr (input VAT and TDS receivable show as minus); purchase is Dr - Cr.

4.4 Control & Registers

- Universal Register (every document of every module).
- Cancelled documents, draft (unposted) documents, master data exceptions.
- LC / BG / PDC dashboard, PDC report.
- Document print status.

- Audit Log (every change with old and new value) and audit coverage.

5. Sales/Purchase menu (reports)

- **Sales, Salesman & Routes:**
 - Sales/purchase analysis (by party, product, group, area, and so on), monthly analysis, profitability, rate history, rate & discount history.
 - Salesman-wise, route-wise and area-wise sales; route plan vs visit; not visited; visit log.
 - Order register, pending orders, order fill rate, product-wise orders.
 - Target vs achievement, salesman performance, commission register.
 - Customer lists, credit exceeded, inactive customers, loading sheet.
- **Purchase:** purchase register, GRN outstanding (received but not billed), supplier list, LC register, consignment cost.
- **Inventory & Production:**
 - Stock report, stock movement (opening + in - out = closing, qty and value), stock in/out, stock valuation, stock ageing & expiry, re-order & over-stock, non-moving items, price list.
 - Production register, raw material consumption, BOM vs actual, production cost trend.
 - Fixed asset schedule and depreciation detail.
- **Poultry, Construction, Automobile:** the industry reports listed in the menu (batch profitability, mortality, site profit, job card register, and so on).

6. Analysis menu

- **Dashboards:** the main dashboard (widgets and graphs you can arrange), work dashboard, LC/BG/PDC dashboard, PDC dashboard, poultry dashboard.
- **Sales & Profit Analysis:** as in section 5.
- **Forecasting & Inventory Analytics:**
 - FSN (fast/slow/non-moving), ABC, XYZ and the ABC-XYZ matrix.
 - Stock cover and stock-out forecast, inventory turnover, dead stock.
 - Sales/purchase forecast, purchase plan, weekly cash-flow forecast.
 - Period comparison, customer RFM (new and lost customers), income & expense comparison, DSO/DPO.

All reports are read-only: they never change accounts or stock.

7. Setup menu

7.1 Company & Control

System Control

The main switchboard:

- **Business Nature and features:** trading, poultry, construction, automobile.
- **Default ledgers:** sales, purchase, returns, VAT, GRN clearing, rounding, stock transfer/adjustment, non-saleable.
- **Stock:** valuation method (FIFO, moving average, weighted average, last purchase), batch/serial costing, negative stock control, multiple warehouses.
- **Dual unit:** fixed or flexible.
- **Grid columns:** free qty, batch, alternate unit, mfg/expiry.
- **Party defaults:** bill-wise tracking and credit control.
- **Approval Needed For:** modules that must be approved before posting.
- **Transactions that show product-wise terms.**
- **Computerized Billing (IRD)** and CBMS settings.

Effect: changes how every later entry posts. Change ledgers or methods with care after posting has started.

Fiscal Years

- Create fiscal years (BS). Numbering and reports follow the fiscal year.
- **Year Closing...** (on a year) shows what closing posts, then **Post Year Closing**:
 - every Profit & Loss ledger (income / expenses) is brought to nil against the **Profit & Loss A/c** (an Equity ledger, made the first time if there is none);
 - the **closing stock** (valued by the chosen method, e.g. Weighted Average) goes to the **Closing Stock A/c** and is carried forward as the next year's **opening stock** (item-wise list under **Stock c/f**);
 - the year's net profit / loss lands in the Profit & Loss A/c, the year is locked and the next year becomes current.
 - One closing voucher (type *Year Closing*, dated the year's last day) does all of this; the year's P&L and Trial Balance still show the year before closing, the next year's Trial Balance opens with nil P&L heads.
 - Years are closed in order (the earlier year first).
- **Re-open** opens a closed year for changes again. **Re-close** posts the closing again with the new figures; **Cancel Closing** removes it.
- **Re-closing after a change in an old year** (top of the screen):
 - **Auto** - when anything dated in a closed (or re-opened) year changes, its closing and every later one are re-posted by themselves (when Fiscal Years or a financial statement is opened);
 - **Manual** - the year only shows **Re-closing required** (with the reason); press **Re-close** (or **Re-close all**).
- Nothing dated in a closed year can be posted, cancelled or changed - the entry is refused before anything is saved.

Branches & Warehouses

- Branches and their warehouses, each with an optional stock ledger (used by stock transfer posting).

Business Units

- Units/divisions to tag entries with; P&L by Unit.

Ledger Mapping

- Map special purposes (cash, bank, VAT, round-off, and so on) to ledgers.

Document Numbering

For each document type (and branch/user if needed), create numbering categories:

- **Mode:**
 - **Automatic:** running number.
 - **Manual numeric** or **manual alpha-numeric:** typed.
 - **Automatic date-wise:** the number restarts every day, with a date part.
 - **Automatic month-wise:** restarts every month.
- Prefix, suffix, starting number, fill character, length, maximum length (or flexible length).
- Date format and Nepali/English date.
- Valid from/to dates.

The entry shows the next number before you save.

Currencies

- Currency code, name, symbol and exchange rate (NPR is the base). Choose a currency on an entry to see the Local Amount in NPR.
- Note: posting to accounts currently uses the entered amount, so keep posted entries in NPR until local-currency posting is added.

Entry Field Control

For each transaction (and user, if needed):

- Which fields show, which are compulsory, their default values, and which cannot be changed.
- Which source documents may be pulled (Quotation, Order, Challan/GRN).

User Defined Fields

- Add your own fields to masters and documents; they can be printed.

7.2 Users & Security

- **Users:** create users, link them to a security group and branch, reset passwords.
- **Security Groups:** rights per menu (view, create, edit, delete, print), plus the **Approvals** section (which documents this group may approve).
- **Data Access:** limit what a user or group can see: ledgers, sub-ledgers, products, companies, groups, categories and areas. Hidden items are removed from lists and reports.
- **Audit Log:** every change with who, when, old value and new value.
- **Change My Password.**

7.3 Printing & Messaging

- **Document Designer:** design bill/voucher print layouts (fields, logo, columns, user-defined fields).
- **Messaging Templates & Auto-send:** email, SMS, WhatsApp and Viber templates; send automatically when a document is posted (e.g. bill to customer); outstanding reminders in bulk.
- **My Notification Settings:** which alerts you receive, and how.

8. Tools and Office menus

- **Views (every screen):** on the title bar of every report. Set the tab, filters and options, filter / sort / hide columns with in the column headers (> *Hide this column*; grouped headers such as Sales / Purchase work too), then **Save As** a named view - mine or shared with colleagues, one of mine can open by default. Opening a view puts the tab and fields back, presses Show and restores the column filters, sort and hidden columns, the Grid / Report choice and the whole grid: groups, pivot (Rows / Columns / Values), filters, footers, added columns and the chart. *Columns* lists the columns to show / hide; *Reset filters & columns* clears them. (Pop-up pickers such as a party are not kept in a view.)
- **Import from another Firm (Tools):** copy masters (account groups, ledgers, sub-ledgers, units, product groups / categories / companies, products, areas, agents, routes, cost / profit centres, business units, warehouses, currencies, billing terms, transport, remarks) and transactions (sales / purchase orders, bills, returns, credit / debit notes, cash / bank entries, journal vouchers) from another firm you can open. Masters are matched by code (only new ones added, or existing ones updated if chosen); documents come in as drafts - **Post imported drafts** posts them here. Nothing is imported twice.
- **Super Admin:** logs in to the **Admin Panel** (all companies, users, last login, subscription; suspend / activate; new company). A company opened from there is **VIEW ONLY** - the server refuses every entry, change or delete; *Admin Panel* on the title bar goes back.
- **Report Center:** every report in one place with search.
- **Manual Document Printing:** print or reprint documents in bulk.
- **Messaging:** send documents or statements; see the message log.
- **IRD Compliance / CBMS:** the IRD register, sync status and resend.
- **Salesman Mobile App:** the salesman sees only the route(s) planned for them on the day (a date-range plan shows on each date of the range). Opening a route lists its customers in visiting sequence, with search. Per customer: **Order** (becomes a Sales Order), **Receipt** (cash / cheque / online) and **No order**. The **Return** tab takes a sales return from a customer of any area / route. Receipts and returns are tagged with the salesman and wait for the office in **Small Balance Write-off (Journal Voucher)**
- Journal Voucher > JV Type "Small Balance Write-off (bulk)" (or Accounts > Small Balance Write-off).
- Choose customers / suppliers / both, Dr / Cr balances, the "up to" amount (e.g. 50) and the date; list; tick all or some; choose the discount ledgers; post.
- One JV nils all ticked parties; their open bills are settled. Cancelling the JV undoes it.

Accounts: Dr balances - Dr Discount Allowed / Cr party; Cr balances - Dr party / Cr Discount Received.

Mobile Approvals. Settings per salesman (Route Plan > Mobile): allow receipts / returns, the mobile cash ledger, off-route customers.

- **Day Book (all-in-one):** one day or a period, with filters for user, salesman / agent, voucher type (sales, returns, purchase, receipts, payments, PDC, journal, notes ...), party and drafts. It shows sales / purchase split into cash and credit, returns, receipts and payments split into cash and bank, PDC, the cash & bank book (opening and closing for the whole business), a party-wise credit summary with closing balances, totals per agent and per user, and every voucher. Without user / agent it is the overall day book.
- **VAT reports (advanced)** in Sales / Purchase VAT Register: **Annexure 13** (party code, name, PAN, Debtor / Creditor, opening balance, capital / other / goods purchase, capital / other / goods sales, closing balance), **Sales / Purchase Monthly** (per VAT month: sales invoices, total, non-taxable, export, taxable, tax; purchase invoices, total, non-taxable, taxable, tax, import taxable, import tax; grand total) and **Party-wise VAT Summary** (PAN, name, P / S, bills, taxable, exempted, VAT). Options: include purchase return, sales return, debit note, credit note, additional bills, taxable JV; sort on; PAN with / without; show PAN; hide opening / closing;

transaction / balance amount >=; export and print. Goods = inventory items, capital = fixed-asset items / capital JVs, other = services, additional bills, JVs, notes; export = foreign-currency sales. The Register also has Sort On, Company and Show Sub-Ledger.

- **Daily Register (one-page day sheet):** the counter's paper day sheet, filled from posted vouchers - Sales cash (A) / credit (B), Purchase cash (C) / credit (D), Received / bank withdraw cash (E) / bank (F), Expenses / bank deposit cash (G) / bank (H), customer (I) / supplier (J) returns; opening cash + A + E - C - G - refunds = expected closing against the books' closing; sales / purchase from the fiscal year start to date; opening / closing stock, gross and net profit; a note count (1000 ... coin) with the difference against books, and the day's note. User / agent filter; Print.
- **Consignment Costing (date-wise)** (Consignment Cost first view): per bill, per product - Qty, Rate, Basic, Add / Less, Net Basic, one column per additional term and per non-additional term, Total Additional, Total Non-Additional, Net Amount and Cost Rate, with a Bill Total row and a Grand Total.
- **Ledger + Sub-ledger Balance:** every sub-ledger's opening / debit / credit / closing with the ledger balance after them, and a Module filter (sales, purchase, cash / bank, journal, inventory, other).
- **Stock Valuation:** batch / serial items follow System Control's batch / serial costing; batch-wise costing values each batch at its own cost, including the landed cost of Purchase Additional. Profitability costs a sale of a batch / serial the same way.
- **Loading Sheet:** items to load with qty by UOM mode (fixed dual "5 Crt 2 Pcs · Total 62 Pcs", flexible "5 Crt = 10 Pcs"), and a Total row with the qty as entered per unit and the total in base unit. Print it together with the **Bill Summary** (and Bill x Item) on one sheet. **Bill summary order:** by bill no, by the customers' **route sequence** (Route master order), or by customer name.
- **English / Nepali dates (every screen):** every date box has a small **BS chip** beside it showing the Nepali date; click it to type the BS date (2083-06-13) or pick a day in the Nepali month calendar - the English box is filled for you, so a date can be chosen either way. Dates in reports follow **System Control > Regional > Date In Reports:** English (2026-09-29), Nepali (2083-06-13) or Dual (2026-09-29 / 2083-06-13). Exports (CSV / Excel) keep the English date.
- **Options & filters in a side panel (every report):** once a report is on the screen, its option and filter boxes step aside; the **Options & Filters** tab on the left edge opens them as a side panel, press the report's Show / Search there to run it again (the panel hides by itself), Hide or Esc closes it. The report keeps only its own tools: the grid toolbar (Filter, Columns, Chart, Highlight ... now on top), Views / Save As. In the panel every block is a titled box (Filters / Options) and the Show button sits at the bottom. Tick-box options (Show: ..., Columns: ..., Include ...) on every report are laid out in one box with equal columns, each option a small box; a ticked option turns blue.
- **Agent filters in every report:** *Agent (party master)* = the agent set on the customer / supplier ledger; *Doc. Agent* = the agent chosen on the bill / voucher. Ledger Report, Party Summary, Ageing, Day Book, Daily Register, Outstanding, Registers, Sales / Purchase Analysis, Loading Sheet and Manual Printing offer both. (Confirmation letters go by the master agent.)
- **Office:** work dashboard, tasks, Darta/Chalani, notification settings, and their reports.

9. How the numbers fit together

- **Stock value in the Balance Sheet** comes from the stock movements valued by your chosen method, not from a ledger. That is why a sales bill does not post a "cost of goods sold" entry: profit is worked out as Sales - (Opening Stock + Purchases - Closing Stock) - Expenses.
- **Challan then Bill (or GRN then Bill)**: stock moves once, on the challan/GRN. The bill books the accounts only.
- **Cancel** always undoes everything the document did: ledgers, stock, bill-wise settlements, and the "used" quantity on the source documents.
- **Drafts and entries awaiting approval** never appear in accounts or stock reports; see Control Reports > Draft Documents.
- **Bill-wise parties**: every bill, return, receipt and note is matched oldest-first (FIFO). The Outstanding and Ageing reports show what is still open.
